

PRESS RELEASE

July 19, 2022 – Mississauga, ON, Canada

Axiomatic Technologies Corporation has developed a series of AC/DC power supply that is suitable for instrumentation and control networks on vehicles.

The AX0807X0 series (AX080710, AX080720) provides clean 24 Vdc or 12 Vdc power and accepts wide ranging input from 95 to 260 VAC. These units have inherent power factor correction and do not require fan cooling. Both models have efficiency ratings over 88% and are operational between -40 to 70 °C.

Protections include surge protection, under- and over-voltage protection, and short circuit protection. Its IP67 rating, use of a corrosion resistant enclosure, and protection against vibration allows for its use in the most harsh and demanding conditions.

Axiomatic designs and manufactures a wide variety of power management and electronic controls that can be applied to off-highway vehicles, lift equipment, electric vehicles, fleet and utility vehicles, emergency vehicles, and mining equipment.
