

TECHNICAL DATASHEET #TDAX181000
TC/Analog Inputs to CAN Controller
 4 Thermocouple, 7 Analog & 3 Signal Inputs
 12 Vdc, 24 Vdc, 48 Vdc
 2 CAN (SAE J1939)

with Electronic Assistant

P/N: AX181000

Description:

The TC/Analog Inputs to CAN Controller receives inputs from engine coolant, fuel and differential pressure sensors, engine temperature sensors, thermistors as well as thermocouples and is networked to a SAE J1939 based control system. Seven +5V references (10 mA) are provided to power the sensors. The 2 CAN ports are isolated from signal inputs and thermocouple inputs.

Using the Electronic Assistant programming tool, the user can select the desired inputs from the following signal options.

- 4 Thermocouples (Type J, K or T)
- 7 Analog Signals (0-5 V, 0-10V, 0-20 mA, 4-20 mA)
- 3 Universal Signal Inputs (0-5V, 0-10V, Thermistor, 0-20 mA, 4-20 mA, PWM, Frequency or Counter, Discrete)

A rugged power supply interface accepts 12 Vdc, 24 Vdc or 48 Vdc nominal for battery powered machine applications. The unit carries an IP67 rating. It carries a CE mark. The rugged enclosure with four 12 pin Deutsch IPD connectors is suitable for diesel engine environments. It operates from -40 to 85°C (-40 to 185°F).

Applications:

- power gen set engine control systems
- oil and gas equipment automation
- marine engine applications
- off-highway machine automation

Technical Specifications:

Specifications are indicative and subject to change. Actual performance will vary depending on the application and operating conditions. Users should satisfy themselves that the product is suitable for use in the intended application. All our products carry a limited warranty against defects in material and workmanship. Please refer to our Warranty, Application Approvals/Limitations and Return Materials Process as described on www.axiomatic.com/service.html.

Block Diagram

Control Logic

From the software perspective, the AX181000 consists of a set of internal functional blocks, which can be individually programmed using the Simulink® model to achieve the required system functionality. The functional blocks include: 1-7 analog inputs (voltage or current); 1-3 signal inputs; 1-4 Thermocouple inputs; 1-14 Can Transmit messages; and 1-14 DM1 messages.

The model operates with Simulink® for easy graphical programming in a model based simulation and development environment. The functional blocks have been readily implemented into the Simulink model. With the Simulink model it is possible for a customer to easily modify functional blocks to produce their own custom software. For example, input and CAN message connections can be altered, transfer functions can be added between inputs and CAN messages and initial values for functional block set points can be configured. The Axiomatic Hardware Interface Library (HWIL) is provided for this purpose. For simulating models using Axiomatic HWIL, licenses for Simulink® and Stateflow® are required. Code generation requires the Simulink Coder™ license in addition.

Inputs

Power Supply Input	12 Vdc, 24 Vdc or 48 Vdc nominal (9...60 Vdc power supply range)
Protection	Reverse polarity protection Overvoltage protection is up to 120 V.
Inputs	4 Thermocouple Inputs 7 Analog Signal Inputs (0-5 V, 0-10V, 0-20 mA, 4-20 mA) 3 Universal Signal Inputs (0-5V, 0-10V, Thermistor, 0-20 mA, 4-20 mA, PWM, Frequency or Counter, Discrete) User programmable (Refer to Table 1.0.) Inputs and Power are isolated from CAN.
Inputs Scan Rate	Each analog and universal input is scanned every 1 ms. A complete scan of all inputs is 10 ms. New measured values are ready every 10 ms. The 4 TC inputs new measured value is available every 400 ms.
Analog Grounds	10 are provided and they are common to each other.

User Interface	<p>The Electronic Assistant, P/N: AX070502, for <i>Windows</i> operating systems comes with a royalty-free license for use on multiple computers. It includes an Axiomatic USB-CAN converter to link the device's CAN port to a <i>Windows</i>-based PC.</p> <p>The setpoints can be viewed and programmed using the standard J1939 memory access protocol through the CAN port and the PC-based Axiomatic Electronic Assistant®. The EA can store all setpoints in one setpoint file and then flash them into the unit in one operation. The setpoint file is created and stored on disk using a command <i>Save Setpoint File</i> from the EA menu or toolbar. The user then can open the setpoint file, view or print it and flash the setpoint file into the controller.</p>
Operating Conditions	-40 to 85 °C (-40 to 185 °F)
