

TECHNICAL DATASHEET #TDAXTC4
Thermocouple Module, 4 Channel
P/N: AXTC4

Monitors 4 Type J, K or T Thermocouples
CAN (SAE J1939), RS-232
with Electronic Assistant®

Description:

The Thermocouple Module monitors up to 4 channels of Type J, K or T thermocouples (others on request). The temperature information is provided to the engine control system over SAE J1939 CAN bus. Temperature information can include exhaust temperature, winding temperature, and fluid temperature monitoring. All channels are fully isolated and measure temperatures at the same time. Temperature data is automatically sent over the CAN bus when power is applied. During set-up, using an USB-CAN converter and a PC, the operator can configure the controller via the Axiomatic Electronic Assistant® to suit a wide variety of applications. Integral diagnostics can flag open wire fault detection. CAN communications are via an isolated CAN interface with SAE J1939 protocol. A RS-232 interface allows for quick user adjustments using Windows HyperTerminal or other similar terminal software. Settings are automatically saved to non-volatile memory.

Applications: Applications include power generator sets.

Features:

- Model AXTC4: Reads up to 4 Type J, K or T thermocouple inputs (other thermocouple types on request)
Model AXTC4-04: Reads up to 4 Type J, K or E TC's
- All channels are measured simultaneously.
- Full channel to channel isolation and isolation from CAN line, other inputs and power supply
- Channels configured for SAE J1939 SPN to transmit the temperature measured by that input
- User defined SPN configurability
- Cold junction compensation is provided.
- Thermocouple input resolution is 0.1 °C.
- Accuracy is +/-1 °C throughout the entire range of the thermocouple input.
- For J1939 compliance, all modules comply with the applicable portions of the following:
 - SAE J1939-21, December 2006, Data Link Layer
 - SAE J1939-71, January 2009, Application Layer
 - SAE J1939-73, September 2006, Application Layer – Diagnostic
 - SAE J1939-81, May 2003, Network Management
- Robust 9...36Vdc power supply, 12V or 24Vdc nominal, with reverse polarity protection
- Compact size for mounting directly on the power generator set or remotely
- Rugged IP67 rated packaging with plug-in connections
- Operational from -40 to 85°C (-40 to 185°F)
- RS-232 port for configuration and diagnostics
- **Electronic Assistant®** runs on a *Windows* operating system for user configuration. An Axiomatic USB-CAN converter links the PC to the CAN bus.
- Configuration files can be saved and written to other AXTC4's during setup.

Technical Specifications:
Input Specifications

Power Supply Input	12 or 24Vdc nominal (9...36Vdc power supply range) NB. The maximum total power consumption is <1.5 Watts.
Protection	Surge and reverse polarity protection are provided.
Isolation	Full isolation of each channel from the CAN line, other inputs and power supply. Isolation voltage is 1500 Vac (rms) or 2550V for 1 sec. for all channels to power and 50V (rms) for all channels to CAN interface.
All Inputs	In P/N: AXTC4, the following Thermocouple (TC) types are supported. 4 Type J or K or T Note: Four type J or K or E TC's inputs are supported in P/N: AXTC4-04. (Other TC types are available on request.) All input channels are completely independent of each other and can read the thermocouple temperatures at the same time. Temperature is measured in °C with a 0.1°C resolution. All inputs send a message to the J1939 bus. There are 2 setpoints for each channel that are associated with the input and how the data is measured. Channels are configured to indicate the SAE J1939 SPN to transmit the temperature measured by that input. The Parameter Group Number (PGN) that will be used to send a temperature to the J1939 network is dependant on the Suspect Parameter Number (SPN) that was selected for that channel. Refer to Table 1.0 for a list of supported SPN's. Regardless of the SPN selected, temperature is always available for the associated PGN. The AXTC4 supports all the temperature SPNs as defined in J1939-71 as of January 2009. In order to allow for future expansion, the user can select a "User Defined" SPN (0) which enables a variety of setpoints associated with transmitting the data on the network. This allows the user to select the PGN, size (1 or 2 bytes), data index and repetition rate of the message that will broadcast the temperature for the selected channel. <i>To use the J1939 capabilities, refer to the user manual for details.</i>
Measurement Rate	The measurement rate is 5 scans/Sec. All channels are measured simultaneously. The update rate is 200 mSec.
Common Mode	Common mode rejection is >110 db@ 5V p-p (programmable for either 50 or 60 Hz). Common mode input range is +/- 4 V minimum.
Resolution	Temperature data is measured with a resolution of 0.1 °C. When sending data to the J1939 bus, one byte parameters have a resolution of 1°C/ bit, an offset of -40°C and a range of -40 °C to 210 °C. Two byte parameters have resolution of 0.03125 °C / bit and a range of -273 °C to 1735 °C.
Drift	Overall drift with temperature is 50ppm/°C of span (maximum).
Accuracy	+/-1 °C throughout the entire range of the thermocouple input
Input Configuration	Refer to the user manual for details on configuration.
Shield	Four shield connections are provided.
Ground	Four analog ground connections are provided.

General Specifications

Operating Conditions	-40 to 85°C (-40 to 185°F)
Weight	0.55 lb. (0.25 kg)
Protection	IP67; Unit is conformal coated within the housing.
Vibration	MIL-STD-202G, Test 204D and 214A (Sine and Random) 10 g peak (Sine) 7.68 Grms peak (Random)
Shock	MIL-STD-202G, Test 213B 50 g
Microprocessor	Motorola DSP56F8346
Control Logic	Standard embedded software is provided. <i>Refer to the user manual for details.</i> (Application-specific control logic is available on request.)
RS-232 Port	The controller's RS232 port interfaces to a serial port (i.e. COM1) on a PC (115200 Baud Rate, N81, Xon/Xoff Flow Control). If the Axiomatic plug kit with a built-in RS-232 connector is not used, then the end user can make a RS-232 cable with the following pinout. Controller Grey Connector, Pin 2 -> TXD -> female DB-9 Pin 2 Controller Grey Connector, Pin 3 -> RXD -> female DB-9 Pin 3 Controller Grey Connector Pin 1 -> GND -> female DB-9 Pin 5
User Interface	Electronic Assistant® for <i>Windows</i> operating systems It comes with a royalty-free license for use. The Electronic Assistant requires an USB-CAN converter to link the device's (AXTC4) CAN port to a <i>Windows</i> -based PC for initial configuration. Order the EA and USB-CAN as a kit (P/N AX070502), which includes all interconnecting cables.

Set up of AXTC4 on a CAN Network:

They could be placed between CAN_H and CAN_L terminals at both ends of the network.</p>																																																								
FMI	<p>There are four FMIs associated with each thermocouple channel and include the following functions: High Temperature Shutdown; High Temperature Warning; Low Temperature Warning; and Thermocouple Open Circuit.</p>																																																								
Diagnostics	<p>The controller stores diagnostic data in a non-volatile log. There are four diagnostic log entries associated with each input channel. Each entry is a record of the SPN, FMI and OC for any fault that has occurred. There are eight setpoints associated with if and how the ECU will send diagnostic messages for each channel. For more details refer to the user manual.</p>
