Clean 24 VDC power in a rugged package

- Wide input operating voltage 35 to 65 VDC (48 VDC nominal)
- Up to 80 VDC input versions available
- Conditioned output of 24 VDC with low ripple
- High current output capability (13 A nominal, 18 A peak)
- 315 Watts output power
- Switch mode operation delivers very high efficiency >95%
- Design manages heat dissipation avoiding forced cooling
- Reverse polarity protection
- Short circuit protection
- Robust, rugged and highly reliable
- Compact size for ease of mounting in confined spaces
- Suitable for moist, high shock and vibration environments
- Operational from -40 to 85°C
- IP65 protection
- UL 583 recognized
- Low emissions

**Application:** Designed to interface between 48V batteries and 24V electrical systems such as 24V solenoids, relays and other electrical systems.

**Description:** The DC-DC Converter provides clean 24 VDC power suitable for 24V solenoids, relays and other electrical systems. For operation under the most harsh and demanding conditions, the IP65 rated unit is fully sealed and potted in an enclosure to protect against moisture, shock and vibration. Power from a battery or other source of 48 VDC is converted to a 24 VDC output regulated to 0.5%. The unit has a high current output capability of 13 Amp nominal (18 Amp peak). The device manages heat dissipation and requires no forced cooling systems. Short circuit and reverse polarity protection are provided. The compact unit is designed with extremely rugged surge and transient suppression in addition to sustained over/under voltage protection. With a nameplate rating of 315 Watts of output power, the DC-DC Converter features proprietary dual-phase topology for a high efficiency of >95%.

**Ordering Part Numbers:**

Converter with Wire Harness KIT: **PSU5K** (SMP-BAC-48VD-24VD-01, WH-DTP06-4S-S-2M)

Items can also be ordered individually.

Converter: **SMP-BAC-48VD-24VD-01**
Mating Wire Harness, 2 m: **WH-DTP06-4S-S-2M**
### Technical Specifications:
All specifications are typical at nominal input voltage and 25 degrees C unless otherwise specified.

### General Specifications

- **Efficiency**: >95%
- **Operating Temperature**: -40 to 85°C (-40 to 185°F)
- **Humidity**: 0-99% relative humidity (non-condensing)
- **UL recognition**: UL583 for use on Type E, ES, or EE Battery Powered Industrial Trucks
- **Protection rating**: IP65
- **Electrical Connection**: 4 pin Deutsch connector P/N: DTP04-4P-L012
- **Power +, Power –, Output +, Output –**: See page 3 for pinout. A mating plug assembly with 12 AWG unterminated lead wires is available.
- **Ordering P/N**: WH-DTP06-4S-S-2M
  - (The mating plug assembly is comprised of Deutsch P/N: DTP06-4S, WP4S and four contact sockets 0462-203-12141 with 2 meters (6.5 ft.) of 12 AWG lead wire, unterminated.)
- **Contact the manufacturer for application-specific wiring.**

### Installation

**Set up**

1. A maximum 15A fuse is recommended in the primary circuit to provide protection for the primary wiring.
2. Use four ¼-20 1 inch screws to mount the converter.
3. Snap the mating plug connector with wiring harness into the receptacle mounted on the converter.
4. Once the load is ready to receive power, turn on the power source to the converter.
### Grounding

Protective Earth (PE) must be connected to the grounding stud to reduce the risk of electric shock. The conductor providing the connection should have a ring lug and wire larger than or equal to 4 mm² (12 AWG). The ring lug should be placed between the nut and a star washer. (To secure the ground strap, use an 8-32 “K-LOK” locknut, stainless steel, 3/8” O.D.)

All chassis grounding should go to a single ground point designated for the machine and all related equipment.

The ground strap that provides a low impedance path for EMI should be a ½ inch wide, flat, hollow braid, no more than 12 inches long with a suitable sized ring lug for the module’s grounding lug. It may be used in place of the PE grounding conductor and would then perform both PE and EMI grounding functions.

### Mounting

Mounting ledges include holes sized for ¼ inch or M6 bolts. The bolt length will be determined by the end-user’s mounting plate thickness. Typically ¾ inch (20 mm) is adequate.

If the module is mounted without an enclosure, it should be mounted vertically with connectors facing left and right to reduce likelihood of moisture entry.

All field wiring should be suitable for the operating temperature range of the module.

Install the unit with appropriate space available for servicing and for adequate wire harness access (6 inches or 15 cm) and strain relief (12 inches or 30 cm).

### Pin Out

1. Input + (red)
2. Output + (red/white)
3. Output - (black/white)
4. Input - (black)

Specifications are indicative and subject to change. Actual performance will vary depending on the application and operating conditions. Users should satisfy themselves that the product is suitable for use in the intended application. All our products carry a limited warranty against defects in material and workmanship. Please refer to our Warranty, Application Approvals/Limitations and Return Materials Process as described on www.axiomatic.com/service.html.
