

PRESS RELEASE

August, 2022 – Mississauga, ON, Canada

Axiomatic Technologies Corporation has developed a 10-output valve controller with ethernet capabilities upon request.

The AX029000 unit features ten independent outputs that are configurable as proportional current, proportional voltage, hotshot digital, PWM duty cycle, or on/off digital. The output type is high side sourcing or low side sinking. 12 output voltages are available to power LEDs. It contains one SAE J1939 CAN port that is user configurable through Axiomatic's Electronic Assistant, with ethernet available upon request.

This DIN rail mount controller is operational from -40 to +85 °C and is designed to be applied in industrial process equipment. Protections on this unit include reverse polarity protection, surge and transient protection, under voltage protection, and over voltage shut down.
